

Project Identification

Project Name: Pharmacy System

Current Problem:

- 1- Can't find the required medicine easily.
- 2- Medicines and drugs are arranged randomly or expired without notice.
- 3- Difficulty of counting stock and managing inventory manually.
- 4- Possibility of losing or damaging medicine records and paper prescriptions.

Description about project:

- The system can find the medicine that you want easily by entering the code or the name of the medicine. It enables the user or pharmacist to search and sell any medicine needed. System works to arrange medicines in a specific way such as alphabetical order, expiry date, or by category/manufacturer. The system can count the number of medicines by the medicine code, ensuring fast counting, less effort, and preventing human errors. It keeps digital records safe from being lost or destroyed. The pharmacy system contains all types of medicines, medical supplies, and drugs across different categories.

Feasibility Analysis

- Technical Feasibility

1. We need to design it using HTML, CSS, or JavaScript.
2. We need some applications also to make it like Visual Studio.
3. We need to make it work online when you are connected to the internet.
4. We need to make this website/system work on a specialized operating system like Windows or Android.

- Economic Feasibility

1. The benefit of this project will be acceptable.
2. The loss of this project will be minimal (e.g., from managing discounted or free samples), but it will not cause harm as not everyone accesses free items.
3. The requirement to purchase or process online medicine orders is a valid payment method / credit card.
4. The cost of developing will not be many.

- Organizational Feasibility

Organizational Feasibility Analysis includes the assessment of:

1. **Management prowess:** What is the ability of the initial management team?
2. **Resource sufficiency:** What nonfinancial resources such as human resources (management, pharmacists/employees), facilities/location, equipment, intellectual property protection, etc. are required?

Field	Details
Project Sponsor:	khaled
Business Need:	1- Reduce the loss and damage of medicines. 2- Dispense with paper records and manual billing. 3- Make medicines and stock status available to staff/customers. 4- Make pharmacy system available all the time.
Business Requirements:	1- Update system regularly. 2- Provide online access for ordering and stock lookup. 3- Dedicated IT unit for support. 4- Sponsored ads / promotions for products.
Business Value:	1- Providing accurate medicine information. 2- Saving time. 3- Saving cost. 4- Saving efforts.
Special Issues or Constraints:	1- Deadline in 1 January. 2- Constantly updating expiry dates and prices.

System Request—Pharmacy System
